

POS MobilePro III

Robust, waterproof and stand-alone system

PREMIUM-HARDWARE

Impact, water and dust-resistant

KEYBOARD & TOUCHSCREEN

Quick, easy & intuitive to operate

FULLY-FLEDGED POS SYSTEM

Functions without a server station

HIGH-QUALITY DISPLAY

High-contrast display in sunlight and artificial lighting

FREELY CONFIGURABLE USER INTERFACE

Tailor-made & individual solutions

OPTIMALLY COORDINATED

Hardware & software from one source

EXTREMELY ROBUST

Built to survive being dropped or even submerged in a sink. The wear-free, capacitive touchscreen has a scratch resistant glass surface.

SPECIAL SOFTWARE

The high-performance, technologically advanced POS system software speeds up and simplifies work processes and can be flexibly adapted to your individual requirements.

STAND-ALONE SYSTEM

A POS MobilePro III and a printer is all that you need. The POS system functions completely without the need for a server station. It is the perfect team player within a network.

Leading in POS Technology
More than 175,000 installed systems worldwide

FUTURE-PROOF DESIGN

High-quality materials and meticulous workmanship make the hardware on the POS MobilePro III extremely robust, durable and waterproof. The ability for the system to accept software updates in the event of changes to the law such as e.g. new fiscal requirements or the obligation to label allergens also provides further security for your investment.

DATA SECURITY

The system is not PC-based and is thus perfectly protected against viruses and trojan horses. All data is saved on the POS system and not on a vulnerable cloud.

OUTSTANDING SERVICE

Vectron products are exclusively distributed via a close-knit network of qualified specialist trade partners. This guarantees the provision of expert advice, individual solutions and reliable 24/7 service provision on-site or via our hotline. Remote maintenance options round off the range of services. Every minute the POS system is broken down ultimately costs money!

WELL THOUGH-OUT DESIGN

Unique operating concept that practically combines a touchscreen and keyboard. Experienced staff can take orders and print receipts lightning fast using PLU numbers, while less experienced employees are able to intuitively get to grips with the system with the help of the touchscreen.

CLEVER ADDITIONAL FUNCTIONS

The online marketing tool bonVito enhances Vectron POS systems to include customer loyalty, reservation or reporting functions. By fully integrating it into the POS system, it brings information from both systems together - ideal for setting up a valuable customer list or for evaluation purposes.

bonVito offers features such as customer, payment and gift cards, digital stamps and innovative bonus systems. You can directly manage your own individual campaigns via the POS system - securely and without the need for any additional work.

BRIEF & CONCISE OVERVIEW

- 8.89 cm/3.5" TFT LCD display with 480x640 pixels and LED background lighting
- Ergonomic form
- One-handed operation possible
